

Full-Stack PHP Developer

About us

Informulate is a full-service software development and innovation consulting company that combines application development with Lean & Agile. Founded in 2006, our team's tenacious focus on client outcomes has put Informulate at the vanguard of high-value consulting. We merge continuous improvement, execution, and innovation. As Orlando's premier innovation consultancy, we help mid-sized businesses and social enterprises bridge the gap between business objectives and technology by co-creating unique technical solutions that are guaranteed to help companies scale and innovate. Our team is rapidly growing, and we're looking for rock stars, like you, to join our crazy bunch.

If you are a mid-level, full-stack LAMP developer who is ready to move up the ranks and internalize core Agile + Lean Startup concepts for an awesome company with great clients, then we invite you to apply for our Full Stack/PHP Developer position. This role will be responsible for developing back-end features while integrating the latest in front-end technologies. Some of your primary roles and responsibilities will include: systems analysis, code creation, testing, building/releasing technical documentation, and client support. You will possess a breadth of experience in helping to architect and develop complex software solutions while maintaining a highly collaborative and self-starting attitude to your workflow.

Must have

- Five or more years of experience in full-stack, object-oriented web development and database design (PHP, MySQL or Postgres)
- Experience with PHP MVC frameworks like Symfony or Laravel
- Experience with Javascript frameworks like Angular, Vue, or React
- Experience with Agile/Scrum methodology
